# Sprint 0

SW315-SPM

- **Description:**

The app is designed to provide a user-friendly platform for book enthusiasts to easily manage and organize their personal libraries. It focuses on helping users track their reading journey, from adding new books to marking progress and prioritizing favorites. The app enhances book discovery through tailored recommendations. It offers a seamless experience for book lovers looking to explore, enjoy, and engage with their collections in a more structured way.

- **Problem Definition:**

Managing a personal book collection can be overwhelming, especially when dealing with a large number of books. Users often struggle to keep track of their reading progress, find specific books easily, and organize their library in a way that enhances the reading experience. Additionally, discovering new books can be challenging. There is also a lack of seamless platforms where users can buy and sell books within a community. These challenges create a fragmented reading and book-sharing experience for users, limiting their ability to enjoy and organize their collections effectively.

- **Proposed Solution:**

The app offers a comprehensive solution to streamline personal book management and enhance the reading experience. Users can easily add books to their collection, track their progress with status markers (e.g., “Reading”, “Completed”), and prioritize their favorite books for quick access. The advanced search function allows users to find books based on specific criteria, such as title, author, genre, or publication year, and offers personalized recommendations tailored to their interests. The app also includes a Book Marketplace, enabling users to buy and sell books. Additionally, users can rate books on a five-star scale, helping others make informed decisions. This all-in-one platform helps users organize their library, discover new books, and engage with the book community.

# Sprint 0

SW315-SPM

- **Scope:**

The app will provide a platform for managing personal book collections, including features such as:

Book Management: Add, track, and organize books, with progress tracking and favorites prioritization.

Advanced Search: Search books by title, author, genre, and get personalized recommendations.

Marketplace: Buy and sell books with details like price and condition.

External Integration: Fetch book details from external databases.

The app will not include features like book publishing or audiobook integration.

- **Users:**

The app serves the following user groups:

1. **Book Enthusiasts:** Individuals who enjoy reading and want an organized way to manage their personal book collection.
2. **Buyers and Sellers:** Those interested in buying or selling books, connecting with other users in the book marketplace.
3. **Bookstores:** Small-scale businesses looking to manage their inventories and offer books for sale in the marketplace.

- **Tools:**

1. **Design Tool:** Lucidchart
2. **Communication Tool:** Zoom
3. **Repository Tool:** Github - <https://github.com/jumAsm/Bookery.git>
4. **Agile Planning Tool:** Jira
5. **Development Tool:** Android Studio

- **Functional And Non-Functional Requirements:**

Priority:

- **Pink** - high
- **Green** - medium
- **Blue** - low

- **Functional Requirements:**

Req ID	Requirement Definition
FR-01	The system must allow users to add new books to their personal library.
FR-02	The system can enable users to mark the reading progress of books with statuses such as “Reading” or “Completed”.
FR-03	The system can allow users to mark books as favorites for quick access.
FR-04	The system must allow users to search books using multiple criteria: title, author, genre, and publication year.
FR-05	The system shall provide personalized book recommendations based on user preferences and reading history.
FR-06	The system can allow users to rate books using a star rating system (1 to 5 stars).

# Sprint 0

SW315-SPM

Req ID	Requirement Definition
FR-07	The system must enable buying and selling of books with details like price and condition, connecting users in a community.
FR-08	The system shall automatically fetch book details from external databases.

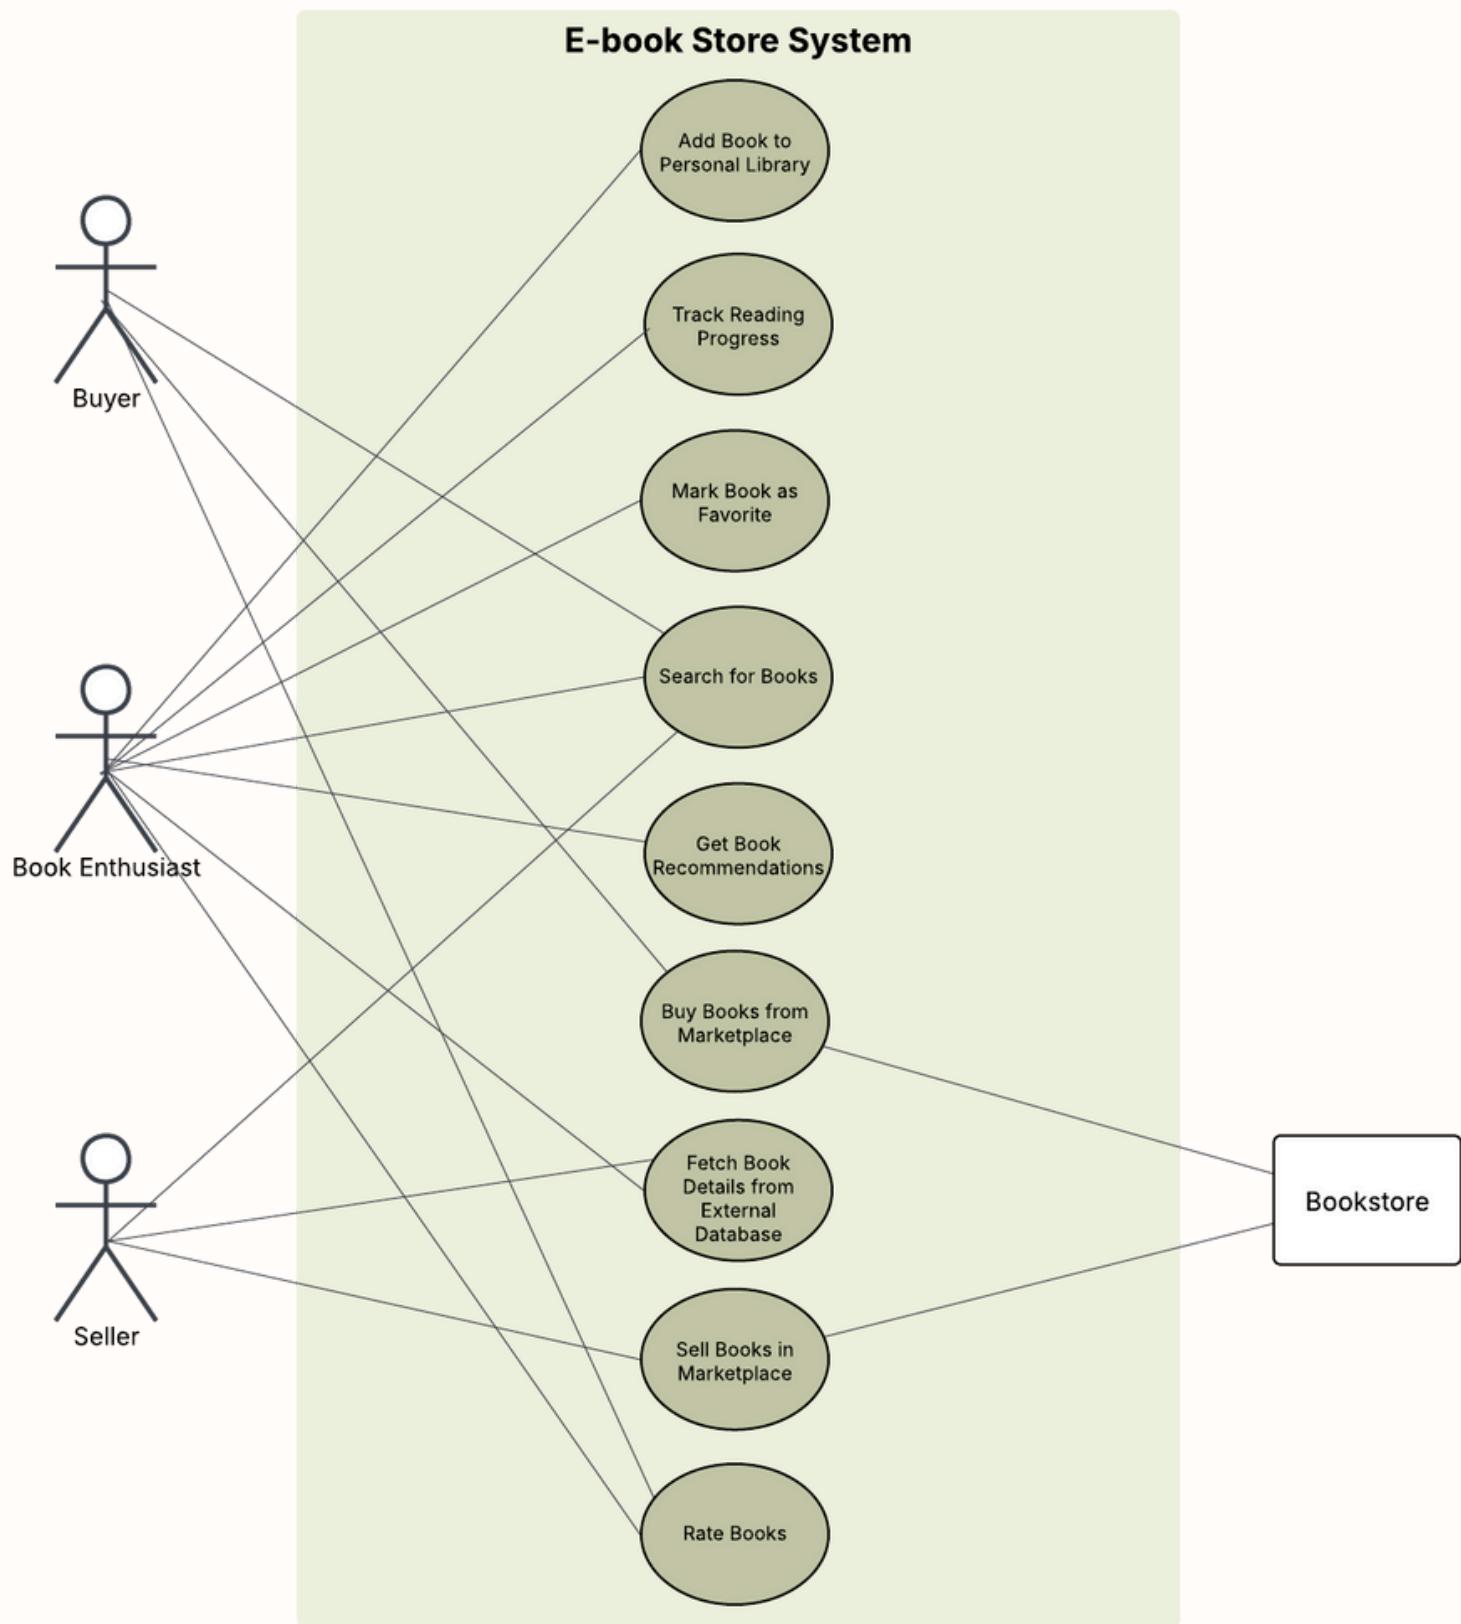

- **Non-Functional Requirements:**

Req ID	Requirement Definition
NFR-01	The system must provide an easy-to-use interface for all users.
NFR-02	The system must ensure fast response when searching or loading data.
NFR-03	The system must protect user data and transactions in the marketplace.
NFR-04	The system shall support smartphones and tablets.
NFR-05	The system shall facilitate app updates and bug fixes for easy maintenance.
NFR-06	The system shall ensure the application is accessible to most users at all times.

## **Requirement Specification:**

- Components Name:**

Add new book for sale and Buy a book.

- Sprint 1 Stories:**

**1- Component Name:** Add new book for sell.

**Story Sequence No:** 01

**Story Short Description:** User can add a book to sell it.

**Story Long Description:** User will be able to add a book for sale by providing all details (title, author, price, category, etc..) and uploading the cover image and the digital book file. The system shall validate and save this comprehensive listing to the database, ensuring its immediate availability on the Book Market.

**2- Component Name:** Buy a book.

**Story Sequence No:** 02

**Story Short Description:** User can buy a book from market.

**Story Long Description:** User will be able to add a book to their Basket from the Book Details page. They will then be able to review the total cost of items in the dedicated Basket Page. Finally, the system shall allow users to initiate the Checkout process to complete the purchase.

## Meeting Details

### Sprint Meeting(s)

**Project Name:** Bookery

**Project Members:**

Jumana Al-asmi - Aliyh Al-rwithi - Ghadeer Al-saeedi - Mariam Anbr

**Sprint #1 Stand up Meeting - [02/10/2025]**

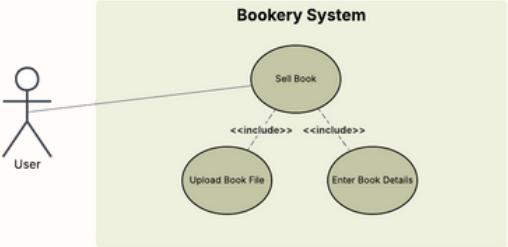

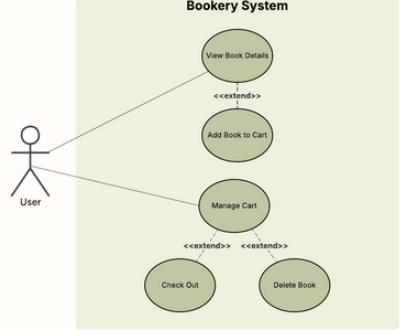

**Sprint Duration:** 2 Weeks.

**Scrum Master:** Jumana Al-asmi

**Client:** Ms. Malak Alharbi

**Pair Programmers:** Jumana Al-asmi and Aliyh Al-rwithi

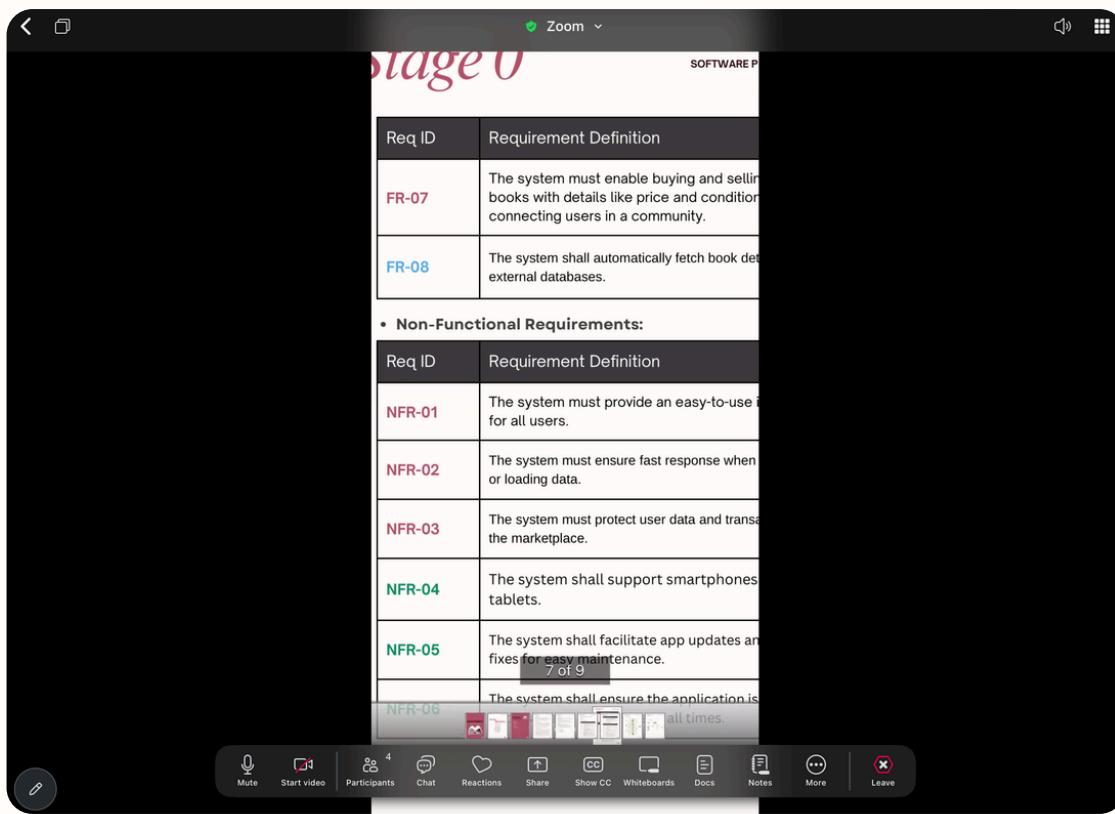

**Stories:**

Component Name	Story Sequence Number	Use Cases (e.g., functionalities)
Add new book for sale	01	
Purchase a book	02	

**Follow-up meeting questions:** Since the last meeting, we have successfully completed the core logic and development functions, including writing their user stories, creating test cases, and drawing the sequence diagram. For our next steps, we will proceed with implementing other remaining functions in the program and ensuring they are complete by the same way. The main impediment we faced was encountering problems when attempting to run the program after connecting Firebase, but this has been resolved by successfully migrating our local data handling from Firebase to the Hive database.

# Sprint 1

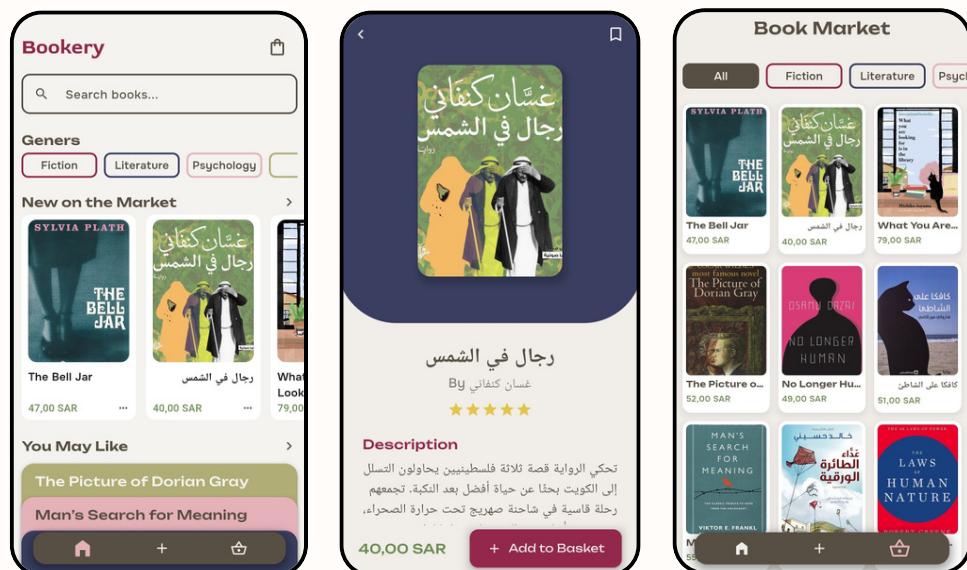

SW315-SPM

## Implementation

below is the link to the Github repository

<https://github.com/Bookery.git>

# Sprint 1

SW315-SPM

## Testing

**Test Case Name:** Sprint#1 Add book for sale

Test Case No.	Test Case Description	Expected Results	Outcome (Pass / Fail / Other)
TC-AB01	User attempts to save a new book (on AddBook screen) while leaving the Title field blank.	System displays an error message: "Please enter book title."	Pass
TC-AB02	User attempts to save a new book (on AddBook screen) without selecting a <b>Cover Image</b> (when addBookCubit.coverUrl is null).	System prevents saving and displays a failure message: "Please ensure all fields are selected and files are selected.".	Pass
TC-AB03	User attempts to save a new book (on AddBook screen) without uploading the Book File (PDF).	System prevents saving and displays a failure message: "Please ensure all fields are selected and files are selected.".	Pass
TC-AB04	User completes all required fields (Title, Cover, File, Price) and taps Save.	The book is saved to Hive, the form is cleared, and the user is navigated back to the home screen..	Pass
TC-AB05	User enters invalid format (e.g., text) in the Price field and taps Save.	Validation fails; an error message is displayed.	Pass

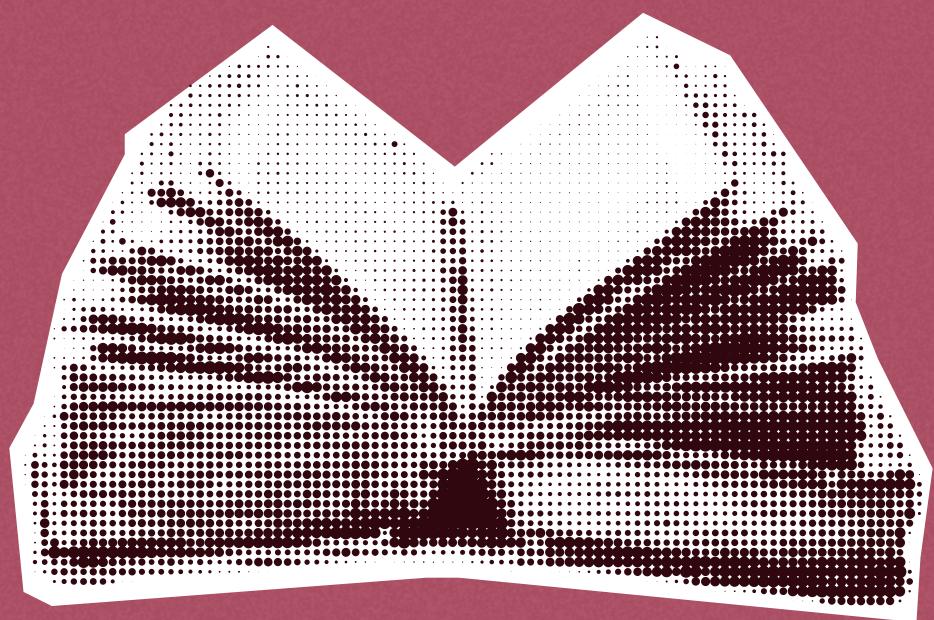

# Sprint 1

SW315-SPM

## Testing

**Test Case Name:** Sprint#1 Buy a Book

Test Case No.	Test Case Description	Expected Results	Outcome (Pass / Fail / Other)
TC-BB01	User views a book in the BookDetails page which is NOT currently in the basket.	The button displays 'Add to Basket' with an Add Icon and a pink background.	Pass
TC-BB02	User taps the 'Add to Basket' button on the BookDetails page.	1.The button state changes to 'In Basket' 2.The book's isInBasket field in Hive is updated to true. 3. A message is displayed: "Book added to basket!".	Pass
TC-BB03	User views the Basket Page after adding a book.	The total number of items and the Total Price are correctly calculated and displayed.	Pass
TC-BB04	User completes all required fields (Title, Cover, File, Price) and taps Save.	1.The book's isInBasket field in Hive is updated to false. 2. The BooksCubit calls fetchAllBooks() to update the list. 3. A message is displayed: "Book is removed from basket!".	Pass

### Sprint Meeting(s)

Component Name	Story Sequence Number	Use Cases (e.g., functionalities)
Mark books as favorites.	03	<p>The diagram shows a User actor on the left connected to a 'Bookery System' boundary. Inside the system, four use cases are defined: 'Select a book', 'Display book details', 'Add to Favorites', and 'updates the book's favorite status'. 'Select a book' and 'Display book details' are marked with a double-lined circle, indicating they are included in the 'Add to Favorites' use case. A note 'User' is positioned next to the actor.</p>
Rate books.	04	<p>The diagram shows a User actor on the left connected to a 'Bookery System' boundary. Inside the system, five use cases are defined: 'Select Book', 'Displays the rating interface (1-5 stars)', 'Display Book details', 'Selects a star rating', and 'Save rating'. 'Select Book' and 'Display Book details' are marked with a double-lined circle, indicating they are included in the 'Selects a star rating' use case. A note 'User' is positioned next to the actor.</p>

**Follow-up meeting questions:** Since the last meeting, we have successfully completed the core logic and development functions, including writing their user stories, creating test cases, and drawing the sequence diagram. For our next steps, we will proceed with implementing the remaining functions in the program and ensuring they are completed using the same approach. The main impediment we faced was encountering an issue in the library section regarding how to update the books in the correct order within the personal library.

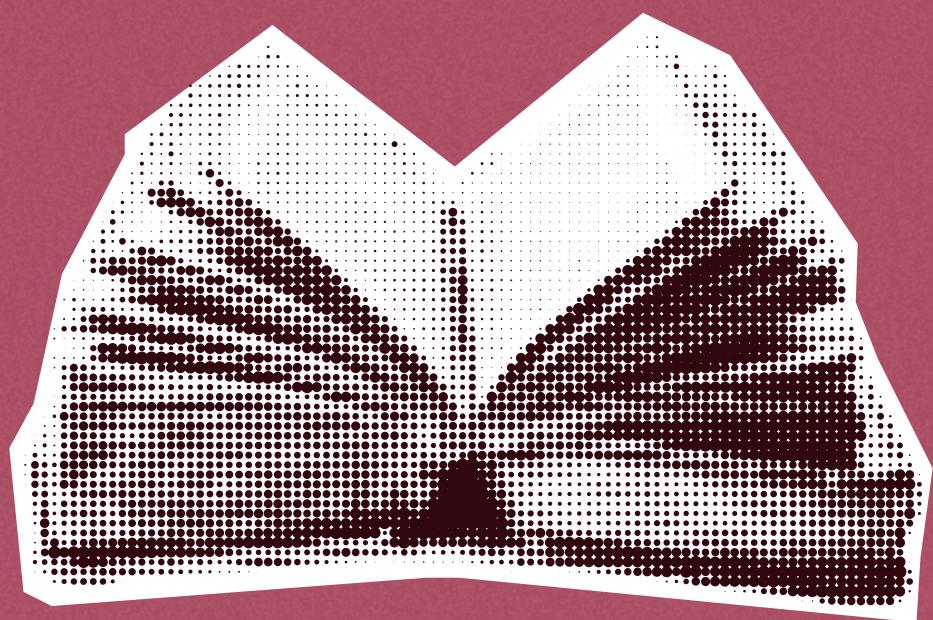

# Sprint 2

SW315-SPM

## Testing

**Test Case Name:** Sprint#2 Personal Library Management

Test Case No.	Test Case Description	Expected Results	Outcome (Pass / Fail / Other)
TC-PLM01	user attempts to submit a rating for a book whose status is not "Completed" (e.g., "Reading").	The rating interface is either disabled, hidden, or an error message is displayed ("You must complete the book to rate it").	Pass
TC-PLM02	The user clicks the favorite button to mark a book as a favorite.	The favorite icon changes state (e.g., becomes filled/colored), and the book is added to the "Favorites" filter or section.	Pass
TC-PLM03	The Seller clicks the 'Delete' button and then confirms the action in the prompt	The book is permanently removed from the market. A success message might be displayed.	Pass
TC-PLM04	A user successfully completes the purchase process for a book listed in the Book Market.	The purchased book is immediately removed from the market list (no longer available for purchase).	Pass
TC-PLM05	A user successfully completes the purchase process for a book listed in the Book Market.	The purchased book is successfully added and visible in the current user's personal library.	Pass

SW315-SPM

## A Look at Bookery

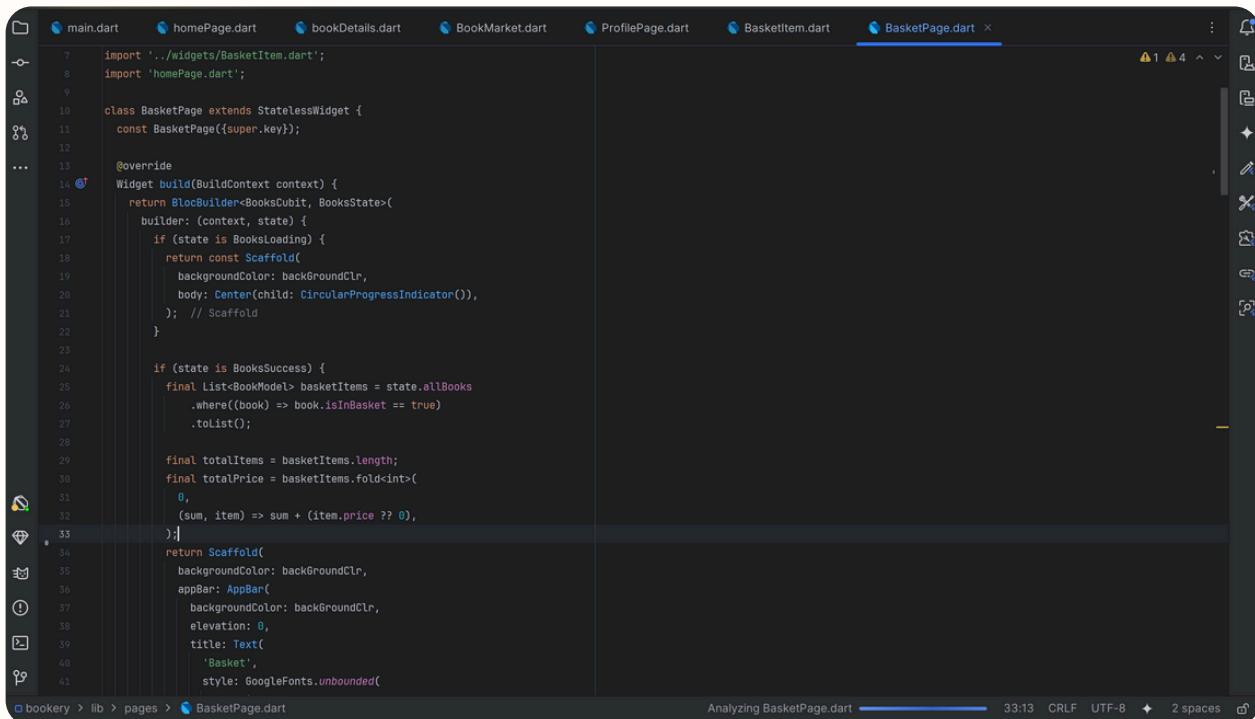

The screenshots illustrate the Bookery app's features:

- Bookery Home Screen:** Shows a search bar, genres (Fiction, Literature, Psychology), and sections for "New on the Market" and "You May Like". Books like "The Bell Jar" and "The Picture of Dorian Gray" are listed.
- Book Detail Screen:** Displays the book "رجال في الشمس" by غسان كنفاني. It includes a cover image, author information, a 5-star rating, and a detailed description in Arabic about a Palestinian story about a man who becomes a taxi driver after losing his job.
- Book Market Screen:** Shows a grid of books from various authors and titles, each with a price and a "View Details" button.
- Sell Your Book Screen:** Allows users to upload a book file and enter details like title, description, author name, pages, and rating.
- Basket Screen:** Shows a list of items in the shopping cart, including "What You Are Looking For Is in the ...", "The Picture of Dorian Gray", and "كافكا على الشاطئ". It shows a total price of 182,00 SAR and a "Checkout" button.
- Personal Library Screen:** Displays the user's collection, bookmarks, and recently added items like "Will in the World" and "The Song of Achilles".

## Part of the Code

A screenshot of a code editor showing the `homepage.dart` file. The code is part of a Flutter application for a book store. It handles the logic for displaying the home page, including searching for books and managing a basket. The code uses BlocBuilder and BooksCubit to manage state. It includes imports for `Icons`, `SafeArea`, and `SingleChildScrollView`. The editor interface shows tabs for other files like `main.dart`, `bookDetails.dart`, etc., and various toolbars.

```
if (_currentIndex == 3) {
    return const ProfilePage();
}

return BlocBuilder<BooksCubit, BooksState>(
    buildWhen: (previous, current) => true,
    builder: (context, state) {
        bool isBasketNotEmpty = false;
        List<BookModel> searchResults = [];
        final bool isSearching = booksCubit.currentSearchQuery.isNotEmpty;

        if (state is BooksSuccess) {
            isBasketNotEmpty = state.allBooks.any(
                (book) => book isInBasket == true,
            );
        }

        if (isSearching) {
            final query = booksCubit.currentSearchQuery;
            searchResults = state.allBooks.where((book) {
                return (book.title?.toLowerCase()?.contains(query) ?? false) ||
                    (book.author?.toLowerCase()?.contains(query) ?? false) ||
                    (book.category?.toLowerCase()?.contains(query) ?? false);
            }).toList();
        }
    }
);

final IconData basketIcon = isBasketNotEmpty
    ? Icons.shopping_bag_rounded
    : Icons.shopping_bag_outlined;

final Color basketColor = isBasketNotEmpty ? pinks : blacks;

return SafeArea(
    child: SingleChildScrollView(
        padding: const EdgeInsets.only(bottom: 60),
    ),
);
```

A screenshot of a code editor showing the `ProfilePage.dart` file. This page displays a book card with details like price and cover image. The code uses `ImageProvider` to get the book's cover URL and `Navigator.push` to navigate to a book details page when the card is tapped. The editor interface shows tabs for other files like `main.dart`, `homepage.dart`, etc., and various toolbars.

```
bool showPrice = true,
} {
    const double cardWidth = 108;
    const double coverHeight = 160;

    final bool isArabic = book.language == 'Arabic';
    final CrossAxisAlignment crossAlignment = isArabic
        ? CrossAxisAlignment.end
        : CrossAxisAlignment.start;
    final TextAlign textAlignment = isArabic ? TextAlign.right : TextAlign.left;

    final ImageProvider<Object> imageProvider = _getImageProvider(
        book.coverUrl,
    );

    final String priceText = showPrice ? '${book.price ?? 0},00 SR' : '';
}

return Container(
    padding: const EdgeInsets.only(top: 4, right: 4, left: 4),
    decoration: BoxDecoration(
        color: Colors.white,
        borderRadius: BorderRadius.circular(10),
    ),
    child: SizedBox(
        width: cardWidth,
        child: Column(
            crossAxisAlignment: crossAlignment,
            children: [
                InkWell(
                    onTap: () {
                        Navigator.push(
                            context,
